EDUCATION

Carnegie Mellon University

Bachelor of Science in Statistics and Machine Learning

Additional major in Artificial Intelligence | Dean's List w/ High Honors

Pittsburgh, PA

Aug. 2024 - May 2028

Relevant Coursework: AI/ML 1, Parallel and Sequential Data Structures, Principles of Imperative Computation, Intro to Functional Programming, Statistical Computation, Statistical Graphics & Visualization, Matrices and Linear Transformations

Skills: Python (Pandas, NumPy, Matplotlib), C/C++, SML, R, PyTorch, LaTeX

EXPERIENCE

Incoming Enterprise Technology Engineering Intern @ State Farm

State Farm

Remote

June 2026 - Aug. 2026

- Data Aggregation and Automation Team

Effective Coding with AI (15-113) TA

Carnegie Mellon School of Computer Science

Pittsburgh, PA

Jan. 2026 - Present

- Leading first iteration of new CS course that focuses on teaching students/industry professionals in implementing AI into their workflow
- Host weekly office hours + optional work sessions to support student success
- Brainstorm new assignment ideas based on the rapidly changing landscape of AI tools

Undergraduate Statistics Ambassador

Carnegie Mellon Statistics and Data Science Department

Pittsburgh, PA

Aug. 2025 - Present

- Act as a liaison between 300+ undergrad stat students and the Stat faculty and advisors
- Provide peer guidance to students in the Statistics Department in weekly Drop-In Hours
- Plan and host speaker events, informational seminars, game nights to strengthen Stat DS community

Fundamentals of Programming and Computer Science (15-112) TA

Carnegie Mellon School of Computer Science

Pittsburgh, PA

June 2025 - December 2025

- Lead recitations of ~25 students to teach Python and developing strong CS fundamentals and algorithms
- Teach weekly small group sessions for students and tailor material to best suit individual students
- Host resources such as office hours and midterm/final prep sessions to support student development

Undergraduate Research Assistant

Carnegie Mellon High Energy Experiment

Pittsburgh, PA

May 2025 - December 2025

- Under the guidance of Dr. Matteo Cremonesi to implement Graph Neural Networks (GNN) in the area of high energy particle physics, fast machine learning, and real-time artificial intelligence
- Improving upon previous GNN ML algorithms to improve the real-time processing of data delivered by the Large Hadron Collider in Python and C++

UCSB Research Mentorship Program

Department of Geography

Santa Barbara, CA

Summer 2023

- Conducted research in multi-objective spatial optimization modeling and machine learning in sports analytics by leveraging Python under the guidance of Dr. Seonga Cho
- Detailed research process in 5-page research paper, created professional research poster, and presented findings to audience of 100+ at research symposium

PROJECTS

***-timeline** | *Application Design, Claude Code*

TartanHacks Hackathon

- Created AI-free artist portfolio and social platform for creators to share their work, connect with other artists, and build a community that values human creativity over AI-generated content
- Implemented features for AI detection, photo/text uploading, thread system, and user engagement

Human-Robot Interaction Research Paper | *Python, Misty Robotics, Statistical Analysis*

"Analyzing the Relationship Between Faulty Robot Behavior and Trust in HRI"

- Conducted experiment to study relationship between unexpected robot behavior and human trust levels and detailed experiment process in 5-page research paper
- Analyzed participant survey data through statistical tests to test developed hypotheses against previous research
